

Packable Wound Trainer (PWT)

The Packable Wound Trainer (PWT) is a ruggedized task trainer with a simulated hemostatic wound. The PWT is composed of lifelike synthetic skin and includes a hemostatic wound providing trainees with the ability to execute critical patient treatment such as wound packing and compression training. The PWT functions as a stand-alone skills station during the crawl phase of training.

Key Benefits of the PWT

- Advanced sensor technology provides visual feedback when the correct pressure
- is applied for the correct amount of time in the correct location
- Can be mouldaged prior to use to increase realism
- Rugged; can be used repeatedly with little or no maintenance
- Easy clean-up with water after use
- Compact design for classroom use and easy storage
